To our Customers and Friends:

We take great pleasure in presenting herewith our catalog for 1954, in which is listed some three hundred varieties of gladiolus covering a wide range of colors in all size groups. Our list containing the best of the newer and older domestic, as well as many outstanding European and Australian originations are designed to meet the tastes of all glad growers from novice to professional.

Despite an unusually dry season, we have had a very successful growing season. An indication of the quality of our blooms, lies in the fact that our display in the 1953 New England Gladiolus Society Show at Boston received the Massachusetts Horticultural Society's Gold Medal, of which we are very proud.

This year we planted all our bulbs on our new farm I bought to replace the two farms which I had been using in the past. It certainly is the best investment I have made. It is just the right kind of soil for growing top quality bulbs. Our crop of bulbs is the finest and largest we have ever produced; the stock being exceptionally clean, free of disease and thrips. Should you favor us with an order, you will be assured of receiving top quality, young high-crowned bulbs, carefully selected and guaranteed true to name. However, in anticipation of continued heavy demand for our quality bulbs, we strongly urge your prompt action in placing orders to avoid possible future disappointment in not being able to get the variety or size bulbs you want. Orders will positively be set aside in the order received and held for shipment when you want them.

We welcome your personal visits to our house and farm so you may see my methods of culture and the kind of stock we grow and be able to select the varieties you like best. We are especially anxious for you to inspect the Bulb House in which we take special pride. We hope you will not hesitate to ask for any information you desire.

With sincere thanks for your confidence in BIRCHVILLE GARDENS as evidenced by your past patronage, and with best wishes for a very successful season in 1954, I am

Sincerely yours,

JAMES A. MILO

TED WOODS 1954 INTRODUCTION

WAX CANARY

Again we give you a Glad that will please you. In the same class as Rosita, Falcon, Anne Sherman, Connie G., Adorable and others of our orginations. Wax Canary has been grown by several nationally known gladiolus growers throughout the country and is strongly recommended for release. A basket of Wax Canary shown at the Central International in Chicago created a sensation. Nothing like it on the market today in its color range for beauty and growth. Field height over 60 inches with a 30 inch flowerhead. Florets are 5 inches, 20 to 22 buds with 7 or more open in field. Very healthy. Color is light salmon in center blending to deeper Salmon at outer edges with soft yellow lip. Petals are fluted and needlepointed with heavy texture. It has the appearance of being waxed. Wax Canary does not crook or burn. Excellent bulb production and germination. Wax Canary is another top-notcher, and a good investment as stock is short. It is a wonderful commercial and exhibition variety. Blooms in about 80 days.

MISSION BELLS

A sister seedling of Heirloom, that grows taller and has longer flowerheads. A lightly ruffled lavender with white mid ribs that opens 8 to 10 florets on a tall spike of 22-24 buds. The 4½ inch florets are firmly attached. Mission Bells is a heavy producer of bulblets that germinate easily making good size bulbs.

Mission Bells is early and should become a good commercial, and will prove valuable for Hybridizers as it is producing outstanding seedlings.

In three years of growing the only fault we have noticed is some misplacing of florets. Plants of Mission Bells have strong healthy foliage some what like White Gold.

Mission Bells received an A rating in Binghamton in 1950, and was greatly admired at the Boston Show this season where we showed a large basket under the name Early Girl.

Price for 1954: Any size bulb .50 Each.

Special offer: 4 Large, 4 Medium, 4 Small, 25 Bulblets — \$5.00

BLOOMING DATE:

The set of figures following the floret size and color classification, indicate the number of growing days required from planting to date of blooming. The number of days to bloom is usually figured for large bulbs. Medium size bulbs usually require from five to seven days longer to bloom. Because of variations in climate, the number of days for a particular variety to bloom may vary by several days. However, the listed blooming dates will give a fair approximation of what to expect of a variety.

By way of explanation, Large bulbs are 1¼" in diameter and larger and produce the largest spikes. Medium bulbs are ¾" to 1¼" in diameter and produce excellent spikes, often as big as large, but somewhat later. Small bulbs are ¼" to ¾" in diameter and most always bloom, but with smaller sized spikes.

PICARDY (Palmer 31) 530—90

This well known glad is a beautiful light salmon-pink. Has not been offered for the past five years, but now have a healthy strain of this glad that will produce marvelous spikes.

PINK LACE (Jack 46) 560—83

Beautiful soft light carmine rose, with 6-8 large florets open on a good spike. The florets are heavily ruffled. Nice for arrangements and cut flower use.

POLYNESIE (K. & M. 49) 430—90

A pure salmon, deeper than Picardy, with yellow throat and salmon blotch. Very good texture. Opens up to 10 on tall spikes, should be able to take the place of Picardy because of its good health and habits.

RED CHARM (Butt 39) 452—85

Medium deep red opening up to 6-8 on a tall spike. One of the best glads. You should be sure to grow this one. One of the most consistent growers.

REDOWA (Butt 47) 552—85

Bright scarlet-red with darker red throat, enhancing its beauty. Tall grower of 55 inches with 27 or 28 inch flowerheads of 18 to 20 buds. Florets are 5 inches wide, with 7 to 9 open. Heavy show winner this past season.

RED WING (Wright 48) 436—85

A pure scarlet-red with a small feather deep in the throat. Opens 8 perfectly placed florets on a 22-24 bud spike. The 5½" florets are firmly attached on a 32 inch flowerhead. Wonderful commercial and a heavy show winner.

RED CHERRY (Roberts 46) 436—70

This has been moved into the scarlet class where it belongs. A brilliant cherry red with a deeper throat. Opens seven large blooms, on a tall spike. This is one of the finest reds, certainly the best early red.

RHETT BUTLER (Kuhn 47) 336—70

Brilliant orange-scarlet—the first in this color to bloom. Opens 6 to 8 on an 18 to 20 bud flowerhead. Because of its earliness, it will become very popular as a cut flower.

ROSA VAN LIMA (Pltzer 40) 460—80

A fine light rose-pink. A very good grower and one of the best cut flowers.

SALMAN'S GLORY (Salman 47) 507—80

The best from Europe in some time — a supreme beauty and a giant. Pure light cream with carmine blotch. Opens 6 well placed florets. One of the very best. Attracts a lot of attention.

SANDMAN (Butt 41) 486—85

Sandman is exceptionally beautiful for a smoky. Its glistening old-rose color is embellished by a clean-cut reverse-blotch and cream midribs. Stock is limited.

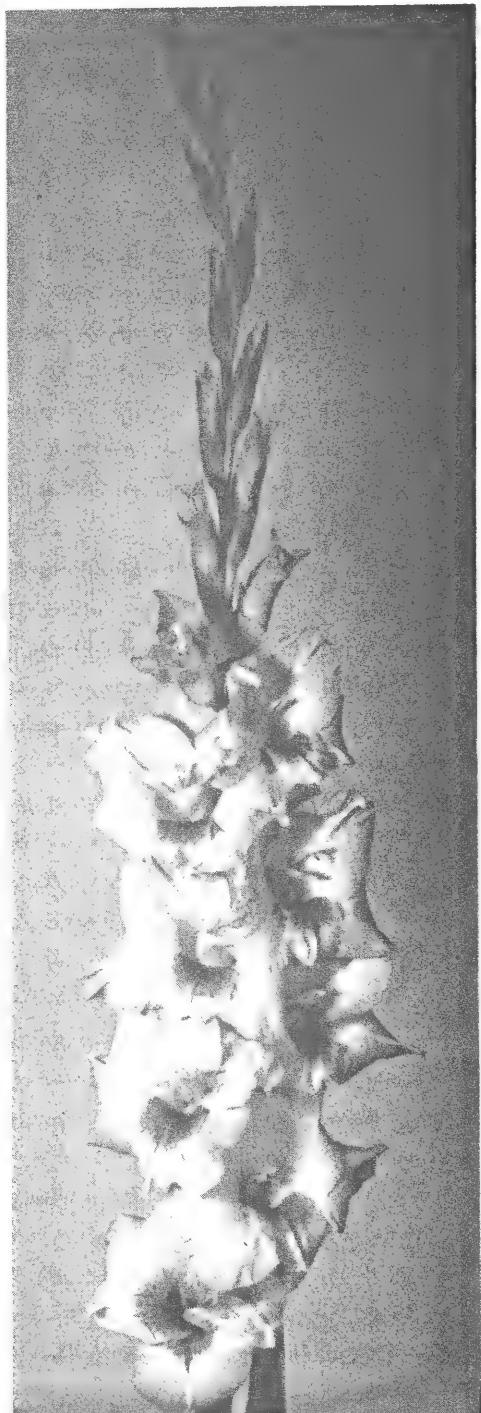

SHEHERZADE (K. & M. 51) 541—80

Creamy pink with a strawberry blotch. It opens 8 heavy texture florets on a medium tall spike. Good color combination and a lot of our customers like it.

SHERWOOD (D. S. Pruitt 48) 570—80

A wonderful shade, rich reddish purple, that opens 7 beautiful ruffled florets. Some flecking but does not detract from its beauty. One of the best in this class.

SIBONEY (Allen 48) 566—90

A giant lavender, somewhat darker than Elizabeth The Queen. Opens 6 to 8 on a 22 bud spike. Has won championship honors at leading shows and is a wonderful variety for florists. BETTER GET A START IN SIBONEY.

SKYLARK (Palmer 48) 523—80

Brilliant deep salmon-orange with midribs of bright yellow. Opens six or more on a 50" spike. Very showy variety that has a lot of admirers.

SPIC & SPAN (Carlson 46) 442—80

A tall ruffled pink that opens up to 10 with 8 more showing color. The placement is excellent and the spikes are tall and straight. Has won many championship awards and is a fine commercial. You can't afford to be without this.

SPOTLIGHT (Palmer 44) 413—80

Without a doubt the best deep yellow of recent years. Has a pronounced scarlet spot in the throat. Produces tall straight spikes with 18 buds. Opens 6 well placed blooms. A dandy show and commercial variety.

STORMY WEATHER (Barrett 47) 480—82

A grand light-toned smoky that has been a favorite for many years. Smooth rosy-grey with some tan or salmon tints and a creamy throat. 8-10 open on tall, straight willowy spikes. An extra nice smoky.

THEMESONG (Klein 47) 570—80

Mallow purple with a cyclamen blotch. Tall straight spike with 7 or more slightly hooded florets open. An unusual color.

TIVOLI (K. & M.) 440—90

A beautiful warm tone pure pink that opens 8 on a good spike. One of the best of the new glads from Europe. A pleasant surprise awaits you when you grow Tivoli.

TRAILS END (Ficht 49) 562—85

Deep lavender rose with a creamy yellow throat. Has 7-8 extra large frilled florets open on a medium spike. Certainly one that rates the word beautiful.

VENIDA (Milo 47) 460—88

It is my opinion and also the opinion of many other growers that this is one of the most beautiful glads. It is a beautiful rose color shaded with lavender and has a big cream blotch. Grows 50 to 60 inches tall with up to 28 buds.

UHU (K. & M. 46) 482—85

Unique color. Uhu reminds me of a lobster before cooking. A dusty brown which is a fine smoky. Stem is medium tall. Vigorous grower that never crooks. Opens 7 well placed florets. This sells itself on sight.

UNCLE TOM (Salman 49) 554—90

Striking deep maroon opening 8 on a tall spike. This looks like one of the best in the dark shades. Better try this one as I am sure you will like it.

BIRCHVILLE GARDENS — Plainville, Connecticut

WAR PAINT (Kadel 47) 436—85

Opens 10 medium size florets on a 22 bud spike. It grows up to 55" tall and has a 27 inch flowerhead. Certainly the best in its class. Winner of Home Achievement Award medal and other top awards.

W. H. HOSMER (Hatch 49) 466—80

Beautiful rose-lavender with a large cream lip. Opens 8-12 on a 19 bud spike with good placement and attachment. Was a stand out in 1952. Good increaser and a fine grower.

WHITE GODDESS (Roberts 48) 500—80

Creamy white that opens 7 heavily ruffled florets on a tall spike. This is a heavy show winner having been best in the show quite often. Fast propagator which should make a good commercial.

YANGTZE (Harris 41) 312—87

A deep empire yellow of good size. A first class grower that is very popular in Canada. This is one of the best low priced yellows. Very fine.

CULTURAL HINTS

Packages of bulbs must be opened as soon as received and the bulbs stored in a cool, dry place until planting time.

PLANTING DATES. Any time from early Spring until the first of July. The blooming season can be prolonged until frost if planted at intervals of three weeks.

WHERE TO PLANT. Glads should be planted in open, sunny places, away from buildings and trees. They are primarily cut flowers and should be planted in rows such as a vegetable garden.

SOIL. Glads will grow in any kind of soil but do best in a sandy loam. The soil must be well drained. It pays to spade deeply.

FERTILIZING. The amount to use will depend upon the fertility of your soil. Any good commercial fertilizer will give good results or you can ask your dealer for the fertilizer commonly used on potatoes in your locality. Most growers prefer the fertilizer in the bottom of the trench as the bulbs are planted. Care must be taken to see that the fertilizer is mixed with the soil and then about 2 inches of soil placed over the mixture. The bulbs should then be set in the row, leaving the 2 inches of soil between them and the fertilizer.

DISINFECTING. All bulbs and bulblets should be dipped in disinfectant in order to kill Thrip and to prevent possible disease infection on the bulbs. Nothing will cure bulbs affected with any of the rots. Bulbs showing rot should be discarded at once. (See formulas for Dips and Sprays.)

PLANTING. Plant from 3 to 6 inches deep. Small bulbs should be planted about 3 inches deep and larger sizes up to 6 inches deep. If you have a heavy clay soil 4 to 5 inches will be deep enough. The bulbs should be set not closer than 4 inches apart in the rows and the soil must be firmed well after planting.

WATERING. Glads need plenty of moisture. To produce top bloom they should have 1½ to 2 inches of water per week. Whenever the natural rainfall fails to supply this quantity be sure to put it on in the form of irrigation. It is best to water just once or twice a week, soaking the soil well, so that the roots are not pushing upward to the surface of the ground.

CUTTING BLOOMS. Glads are the most popular cut flower grown today. To enjoy them at their best the spikes should be cut when the first floret is in full bloom. They should be placed in water at once and taken indoors to develop slowly. You can enjoy a spike a long time as a good variety will open every bud to the tip, in water. If the water in the vase is changed daily and about an inch of the stem is cut off (slantwise) each day, many varieties will keep for as long as a week. When cutting the spike always leave 4 leaves on the plant to develop the bulb for the following year.

DIGGING. Bulbs should not be dug until about 6 weeks after blooming, in order to mature the bulbs. A good sign is to watch the foliage and when it begins to turn brown, dig at once. After the tops are cut off, close to the bulb, dry the bulbs in the air in trays or boxes. It is best not to allow the sun to shine directly on them while drying. After 2 or 3 weeks of drying the old bulb and roots can then be removed. DO NOT remove the husks as this protects bulb during storage.

STORAGE. After drying, the bulbs must not be exposed to freezing temperatures. The ideal storage temperature is 38 to 45 degrees. Bulbs should not be placed too deeply in the boxes as they need air while in storage.

When you get ready to store your bulbs, be sure to give them a light dusting of 5% D.D.T. This will eliminate any danger of thrip feeding on your bulbs during storage period. Glads are easy to grow and anyone, even a beginner, can grow the finest show flowers!

FORMULAS FOR DIPS AND SPRAYS

LYSOL DIP

4 tablespoons of Lysol
3 gallons of water
or
1 pint of Lysol
25 gallons of water

Soak bulbs in the Lysol solution for at least 3 hours and no longer than 6 hours; soak bulblets overnight or 12 to 14 hours. After bulbs or bulblets are removed from the solution, allow to drain for 30 minutes and plant same day as treated, preferably while still wet.

BICHLORIDE OF MERCURY

1 oz. Bichloride of Mercury
7 gallons of water

Soak 10 to 12 hours immediately preceding planting. Plant wet. Must be used in an earthen or wooden container.

NEW IMPROVED CERESAN DIP

1 ounce New Improved Ceresan
3 teaspoons Grasselli Sticker or 3 teaspoons Dreft
3 gallons water

To get a good preparation easily and quickly, mix the Ceresan and wetting agent together, add a little water at a time, and stir until a uniform mixture is obtained. DO NOT USE THE HANDS WHEN STIRRING. Soak bulbs in the solution 15 minutes, stirring several times during the treatment; soak bulblets for 30 minutes. After bulbs or bulblets are removed from the solution, allow them to drain for about 30 minutes and plant IMMEDIATELY. A delay in planting can cause injury to the bulbs. If the ground is dry at planting time, I suggest the Lysol treatment instead of N.I.C. as dryness can cause a considerable delay in germination or growth besides possible injury to the bulbs.

THRIP SPRAY

2 ounces Tartar Emetic
2 ounces brown sugar
3 gallons water

Mix well and spray weekly after the foliage is in third leaf.

or

½ lb. DDT. (50%)
½ pint liquid soap (Germicidal)
25 gallons of water

For small plantings the following DDT spray is reported as giving good results:

1 rounded teaspoonful DDT (50%)
½ teaspoonful Dreft
1 gallon water

DUSTING—The easiest and most efficient means of controlling Thrip is to dust the foliage of the plants with 5% D.D.T. Many types of dusters are available and one can be obtained to suit your size planting. Begin dusting when plants are in third leaf and continue about every two weeks. If this is done you can say goodbye to Thrip!

CAUTION: Bichloride of Mercury, Lysol, New Improved Ceresan, Tartar Emetic, and DDT are poisonous and care should be taken in handling and storing these.
